

# Finite element project

The stationary heat equation

# The different geometries

# The stationary heat equation

$$\begin{aligned}\nabla^2 u(\mathbf{x}) &= 0 & , \quad u(\mathbf{x}) \in \Omega \\ u(\mathbf{x}) &= u_0 & , \quad u(\mathbf{x}) \in \partial\Omega_D \\ k \frac{\partial u(\mathbf{x})}{\partial n} &= -h (u(\mathbf{x}) - u_{amb}), \quad u(\mathbf{x}) \in \partial\Omega_R\end{aligned}$$

# The bilinear form and functional

$$a(u, v) = \frac{k}{h} \int_{\Omega} \nabla u \cdot \nabla v \, d\Omega + \int_{\partial\Omega_R} uv \, d\gamma$$

$$F(v) = u_{amb} \int_{\partial\Omega_R} v \, d\gamma.$$
